

# Integrated Solar Monitoring System

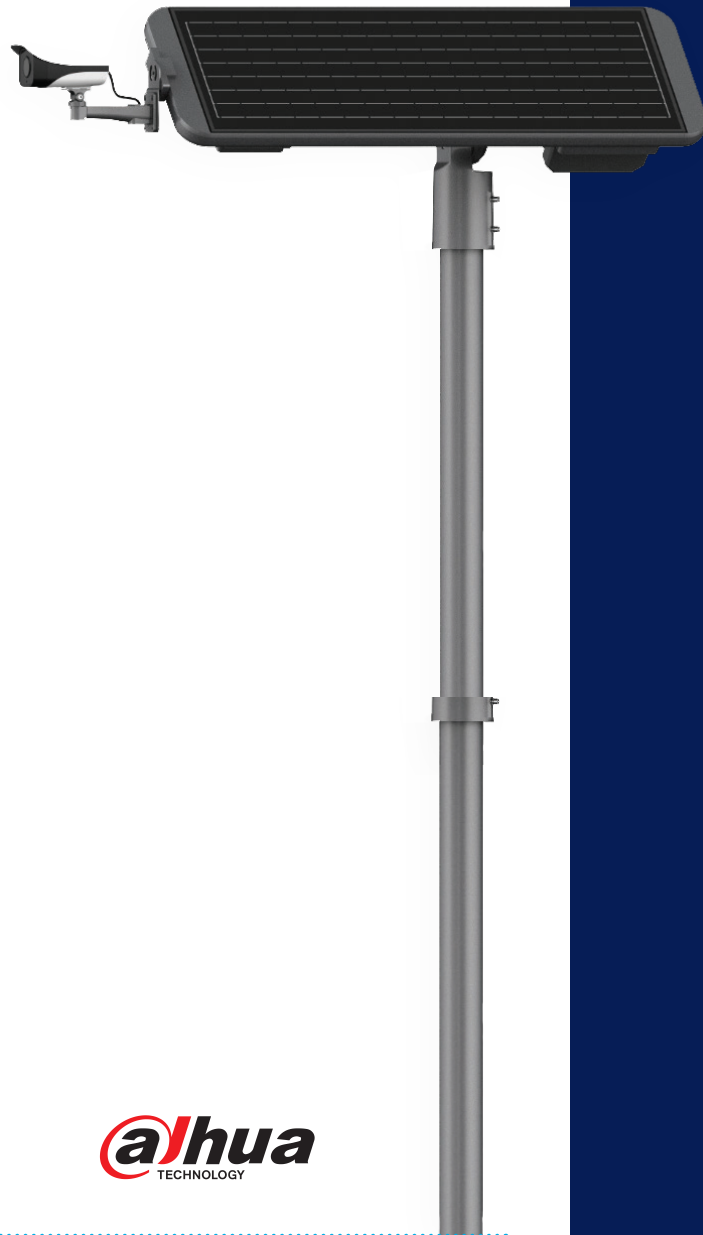

Cable free solar CCTV cameras are ideal for construction sites or businesses that need to close within short notice and are left unattended. The solar powered camera is weatherproof, quick and simple to install and allows real-time remote monitoring on iOS and Android app giving you peace of mind your property is secure.

## System Overview

It's quick and easy to install and requires no fixed wiring. The system includes three parts: 4G network camera, integrated solar power system and the camera's mounting bracket. The camera pole is sold separately.

The solar power system, integrating solar panels, lithium batteries, maximum power point tracking, charging controller and mounting brackets provides stable power supply for the front-end data acquisition system (4G network camera), through a high conversion charging device. It is compact, portable, easy to install, disassemble and maintain compared to a conventional system.

The 4G supported IR bullet camera delivers 2 mega pixel resolution, with a 3.6mm or 6mm fixed lens. The camera can be connected to mobile internet with a SIM card. Solar cameras provide an excellent choice for a variety of small to mid-size applications such as farms, forests, construction sites and small businesses.
